behance.net/desmondkoo

Frontend developer specialising in **animation driven, performance critical interfaces** for web and mobile. Four years across production frontend (TypeScript, React, Laravel) and real time interactive UI built in Cocos Creator, plus a 2D/3D animation background that shapes how I build motion: interfaces that don't just work, but feel responsive. Comfortable end to end: Figma spec to production UI, analytics instrumentation, and squeezing frame budgets on low end devices.

EXPERIENCE

Frontend Developer — Dynamite Games — Jun 2025 – Present

- Build and maintain cross platform interactive interfaces in **Cocos Creator + TypeScript** for web and mobile, with animation driven interaction as the core of the UX.
- Cut load and render cost on low end hardware through lazy asset loading, ASTC texture compression, and draw call reduction, keeping frame rate stable on entry level mobile devices.
- Architected reusable, event-driven UI modules with configurable state machines and animation sequencing, so new features ship without rebuilding interaction logic.
- Integrated **Spine 2D** skeletal animation, audio, and VFX into the interface layer to raise perceived responsiveness across devices.
- Instrumented product analytics end-to-end with **AWS API Gateway + Athena,** modelled session and engagement events, validated endpoints in Postman, and surfaced results in QuickSight to inform UX decisions.
- Collab with designers and backend engineers to translate Figma specs into API-integrated production UI, including multilingual localisation for live releases.

Web Developer — Cipher Technology Sdn Bhd & 6EV Sdn Bhd (Pep & Co Ltd) — Jul 2022 – Jun 2025

- Shipped and maintained **Laravel** web applications across a client portfolio, improving performance, scalability, and long term maintainability.
- Built responsive interfaces with Bootstrap, HTML5, CSS3, and jQuery, delivering consistent layouts across desktop, tablet, and mobile.
- Owned MySQL schema and query optimisation, plus automated email and notification workflows for client platforms.
- Delivered a **Three.js open-world 3D web experience,** real-time rendering, camera control, and asset streaming in the browser.

Selected builds: healthcare booking system (multi-device patient flows) · student portal with role-based dashboards and auth · wildlife cruise booking with map-based selection · HR client portal · food ordering platform with cart management · donation platform with gamified engagement modules.

Video Editor & Animator — Creator Studio (Contract) — Apr 2017 – Jan 2019

- Produced 2D/3D character animation, rigging systems, and motion assets for interactive products, including animated UI transitions and splash sequences for a mobile web platform.
- Optimised animation pipelines and asset budgets for consistent playback across devices.
- Contributed storyboards, motion graphics, and early visual concepts for product launches.
- Edited long- and short-form video with sound design, voiceover, and integrated motion graphics/VFX for a YouTube food-vlog channel.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, PHP, HTML5, CSS3
Frameworks	Cocos Creator, Laravel, Bootstrap, jQuery, Three.js, React
Databases	MySQL
Game & Web	Spine 2D, WebGL, REST APIs
Cloud/Analytic	AWS (API Gateway, Athena, QuickSight), Postman
Dev Ops	Jenkins
Tools	Git, SourceTree, PhpMyAdmin, FileZilla
Design	Blender, After Effects, Photoshop, Illustrator, Premiere Pro
Languages	English, Malay, Chinese, Cantonese

EDUCATION

BSc (Hons) Game Development — Universiti Tunku Abdul Rahman (UTAR) · CGPA 3.39 — 2019 – 2022

Diploma in Creative Multimedia — SEGi College Subang Jaya — 2016 – 2019
